Short Description

Joomla Pop Up Login Module! With this feature, users can log in through a sleek, customizable pop-up window rather than the traditional login page. Here's a clear breakdown of its functions:

Description

Introducing the Joomla Pop Up Login Module!

With this feature, users can log in through a sleek, customizable pop-up window rather than the traditional login page.

Here's a clear breakdown of its functions:

Transparent Pop-Background: The login window has a transparent background, blending seamlessly with your site's design.

Easy to Customize Settings: You can easily tweak the settings to match your site's look and feel.

URL Redirection Option: After login, users can be redirected to a specific URL of your choice.

Tested and Compatible: Works flawlessly with Joomla 4 and Joomla 5.

Versatile: Compatible with all types of Joomla templates.

Simple Installation: Easy to set up and configure, getting you up and running in no time.

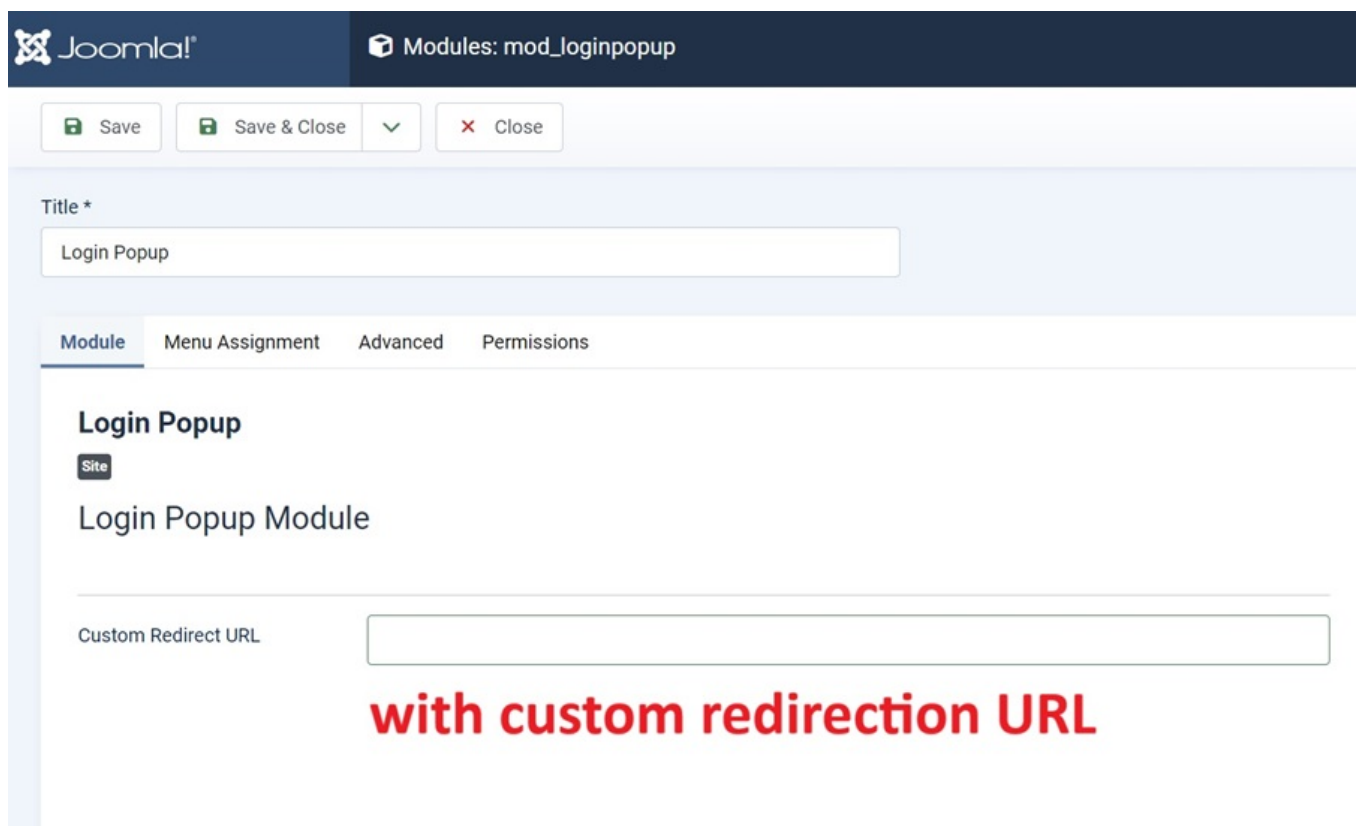

Responsive Design: Works across all devices, ensuring a smooth login experience on desktops, tablets, and smartphones.

Enhanced Security: Includes security features to protect user data during the login process.

Basically, this module streamlines the login process, enhancing the user experience while maintaining security and functionality.

It's perfect for boosting user engagement and satisfaction!

[LIVE DEMO](#)

The screenshot shows the Joomla! administrator interface for the 'mod_loginpopup' module configuration. At the top, the Joomla! logo and 'Modules: mod_loginpopup' are visible. Below the header, there are buttons for 'Save', 'Save & Close', and 'Close'. The main content area has a 'Title *' field containing 'Login Popup'. Below this, there are tabs for 'Module', 'Menu Assignment', 'Advanced', and 'Permissions'. The 'Module' tab is active, showing the 'Login Popup' title, a 'Site' icon, and the text 'Login Popup Module'. At the bottom, there is a 'Custom Redirect URL' field, which is currently empty. A large red text overlay at the bottom of the screenshot reads 'with custom redirection URL'.
